ORANGE™

Before Operating Read These Important Safety Instructions

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of unshielded 'dangerous voltage' within the product's enclosure that may

be of sufficient magnitude to constitute a risk of electric shock to persons. Terminals labeled as "Speaker Outputs" must be connected to a speaker cabinet of the designated load rating using an un-shielded two conductor cable for speaker use at all times during operation.

The exclamation point within an equilateral triangle and "WARNING" are intended to alert the user to the presence of important operating instructions. Failure to heed the instructions will result in severe injury or death.

-
- Read these instructions.
 - Keep these instructions.
 - Heed all warnings.
 - Follow all instructions.
 - Do not use this apparatus near liquid.
 - Clean only with dry cloth.
 - Do not block any ventilation openings. Install in accordance with the manufacturer's instructions.
 - Do not install near any heat sources such as radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat.
 - Do not defeat the safety purpose of the polarized or grounding-type plug. A polarized plug has two blades, one wider than the other. A grounding type plug has two blades and a third grounding prong. The wide blade or the third prong is provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.
 - **Service:** Do not attempt to service this product yourself as opening or removing covers may expose you to dangerous voltage or other hazards.
 - Refer all servicing to qualified service personnel.
 - **Damage Requiring Service:** Unplug this product from the wall outlet and refer servicing to qualified service personnel under the following conditions: (a) When the power-supply cord or plug is damaged; (b) If liquid has been spilled, or objects have fallen into the product; (c) If the product has been exposed to rain or water; (d) If the product does not operate normally by following the operating instructions. Adjust only those controls that are covered by the operating instructions. Improper adjustment of other controls may result in damage and will often require extensive work by a qualified technician to restore the product to its normal operation; (e) If the product has been dropped or damaged in any way; (f) When the product exhibits a distinct change in performance - this indicates a need for service.
 - **Replacement Parts:** When replacement parts are required, be sure the service technician has used replacement parts specified by the manufacturer or have the same characteristics as the original part. Unauthorized substitutions may result in fire, electric shock, or other hazards.

This Orange Amplifier conforms to UL Standard 60065 for Audio, Video and Similar Electronic Apparatus - Safety Requirements; Certified to CAN/CSA-C22.2 No. 60065-03; IEC 60065 2001 + A1:2005

Thank you for choosing Orange. You are now a member of the 'Legendary British Guitar Amplifier' owners club!

Since 1968, when the company was founded, Orange has been a pioneering force in the guitar amplification industry. Today, with a team of the world's finest amplifier engineers, Orange continues to push back the boundaries of conventional tube amplifier design.

Our commitment to craftsmanship and quality control has allowed our amplifiers to stand the test of time, giving their owners as much pleasure now, as the day they were bought. To maintain this level of excellence, each Orange amplifier is put through many rigorous test procedures before leaving the factory.

The warmth, tonal quality and rich harmonics generated by a valve amplifier cannot be reproduced by 'artificial' means. Many guitarists have reached the same conclusion: neither the transistor nor microchip is a suitable alternative to valve technology.

This booklet contains valuable technical and safety information. Please take the time to read this manual as the information may enhance the sound and performance of your amplifier.

We are confident that you will be delighted with your new purchase and that it will provide you with many years of enjoyment.

Front Panel

1. Power Switch

Up position - amplifier is off
Down position - amplifier is on

2. 15 watt/Standby/7 watt Switch

Up position - 15 watt power mode
Middle position - amplifier is on standby
Down position - 7 watt power mode

3. Power Indicator Lamp

4. Volume Control

Controls output volume level

5. Tone Control

Controls frequency response

6. Gain Control

Overdrive/Distortion level

7. Instrument Cable Input

The Gain works from left to right increasing in saturation as the control is turned clockwise.

Plug your instrument in this 1/4" jack

Rear Panel

1. Speaker Outputs

When using a single Orange 16 ohm speaker cabinet, (i.e. PPC412, PPC212, or PPC112), attach it to the 16 ohm output socket on your amplifier.

When using two Orange 16 ohm speaker cabinets attach each one to each of the 8 ohm output sockets on your amplifier.

When using a single 8 ohm cabinet attach it to either one of the two 8 ohm output sockets on your amplifier.

WARNING: Never use two 8 ohm cabinets at the same time.

WARNING: The Orange Tiny Terror amplifiers should not be used with 4 ohm speakers.

The high tension fuse, protects transformers and other circuitry from blowing in the event of an output valve shorting. Please refer to the Technical Specification section for fuse ratings. This is where your mains lead plugs in. Also the mains fuse is located here. Please refer to the Technical Specification section for fuse ratings.

WARNING: This amplifier shall be connected to a mains socket outlet with a protective earthing connection.

WARNING: Where the mains plug or appliance inlet is used as the disconnect device, the disconnect device shall remain readily operable.

2. HT Fuse

3. Mains Inlet Socket & Fuse Holder Tray

Please ensure your amplifier is switched to the correct voltage for your country. If unsure please consult your dealer.

Using Your Amplifier

IMPORTANT! Before connecting your amplifier to a power source, please check the following:

1. Ensure your speaker cabinet is connected to the correct impedance speaker output socket. (see Rear Panel, item 2), using a good quality speaker cable. **Do not use guitar leads.**
2. Ensure that the voltage selector switch is set to the correct mains voltage. (see Rear Panel, item 5).

When powering up your amplifier, switch to the 'Standby' position first and leave for two minutes before switching to either the 7 watt or 15 watt position. (This will maximise the life of your valves).

If you are unsure about any of the above points please consult your local Orange supplier.

Using The Tiny Terror

The Tiny Terror is a single channel amp using a 2 stage gain section. Once the valves have warmed up for no less than 2 minutes switch the amp to either the 7 watt or 15 watt position. You are now ready to play your Tiny Terror. You have three controls: Volume, Tone, and Gain. Rotating the Gain control clockwise will produce tones that range from clean to crunch to super high gain. Rotating the Tone control clockwise will increase the high frequency response. The Volume control is used to set the output level. The 15 watt or 7 watt setting may be set depending on the desired power. The 7 watt position is ideal for studio use.

Enjoy your new Orange Tiny Terror Amplifier!

Technical Specifications

	Tiny Terror
Power Rating:	15 or 7 watts switchable
Preamp Valves:	2 x ECC83
Power Valves:	2 x EL84
Mains Fuse:	T1A @ 220/240v T2A @ 100/120v
HT Fuse:	T250
Weight:	10 kgs.
Dimensions. (mm)	300 x 135 x 160 (handle not included)

WARNING

VALVES AND FUSES CAN FAIL AT ANY TIME!

From time to time output and preamp valves may fail. Most users find regular valve replacement to be of benefit to the general upkeep and reliability of their amplifier. We suggest that you always have spare valves available as replacements in the event of a valve failure. Every Orange Class AB Amplifier will require re-biasing when it's output valves are replaced. This may not be necessary if use the same brand of valves with a similar manufacturers rating. If unsure you should have the bias checked. **BIASING SHOULD ALWAYS BE CARRIED OUT BY AN EXPERIENCED TECHNICIAN.**

Your amplifier uses various fuses to protect your amplifier from inconsistent voltages. It is highly recommended that you keep a supply of spare fuses in case of failure. For more information on caring for your amplifier, visit the Orange website - www.orangeamps.com Tubes, fuses, covers and other accessories for your Orange amplifier are available from our online store - www.orangeamps.com/shop

WARRANTY

This Orange product is protected for one year against defects in material and workmanship. This warranty applies to the entire product, except the speakers, which are protected for three months. Please visit our website and register your purchase. Additional benefits include exclusive, money saving offers for amplifier accessories and Orange merchandise.

Please retain original proof of purchase. Offer void where prohibited.
